

# KRYPTO BLOCK

## BLOCK WITHOUT ACTIVE SUBSTANCE FOR RODENT DETECTION

Placebo bait with fluorescent tracer  
for rats and mice

### Composition

Mixture of flour, flavoring agents, food paraffin with a fluorescent tracer.

### Indications and application

**KRYPTO BLOCK** does not contain any active ingredients. It does not kill rodents.

**KRYPTO BLOCK** is used for three purposes :

- Detect the presence of rodents in a given location and only exterminate infested areas.
- Monitor the resurgence of rodent populations after a successful rodent or mouse extermination operation.
- Trick wary rodents into getting them used to a diet food in the form of harmless paraffin blocks, to then eliminate them very effectively by replacing the placebos with rodenticide blocks.

#### THE ADVANTAGES OF A FLUORESCENT TRACER:

For even better detection performance, **KRYPTO BLOCK** makes urine fluorescent ! Specially designed to attract rodents, the block is formulated in an original way; it contains a substance that accentuates the fluorescence of urine under UV lamp. Thus, **KRYPTO BLOCK** becomes an effective and essential tool for detecting a rodent infestation, allowing a careful inspection of the premises before implementing effective control measures.

### Instructions for use

Preferably use bait stations to clearly identify where the placebo blocks are placed and to get the rodents used to feeding there.

#### Detection :

Have one to three **KRYPTO BLOCK** per workstation and check them regularly :

- No consumption: continue regular checks by changing the bait when it loses its freshness.
- Consumption: undertake a control operation.

The formulation contains a fluorescent tracer, allowing the detection of excrement under UV lamp; passage locations and niches can thus be better determined.

#### Lure :

Place the blocks at the bait stations, just as you would rodenticide blocks. If the block is consumed, you can then move on to a block with a rodenticide active ingredient.

### Packaging

Bare 30 g blocks - 10 kg bucket

### Safety instructions

Although **KRYPTO BLOCK** does not contain any active ingredients, it is not a foodstuff; it is therefore advisable to keep it out of reach of children and pets.

Store in original packaging away from heat and humidity.
