

KRYPTO PASTE

PASTE WITHOUT BIOCIDAL ACTIVE SUBSTANCE FOR RODENT DETECTION

Placebo bait with fluorescent tracer
for rats and mice

Composition

Mixture of flour and flavoring agents in the form of a fluorescent green paste.

Indications and application

KRYPTO PASTE does not contain any active ingredients. It does not kill rodents. **KRYPTO PASTE** is used for three purposes :

- Detect the presence of rodents in a given area and only treat the areas that are actually infested.
- Monitor the resurgence of rodent populations after a successful rodent/mouse extermination operation.
- Trick wary rodents into consuming a harmless paste bait, and then eliminate them very effectively by replacing the placebo paste with a rodenticide paste.

THE ADVANTAGES OF A FLUORESCENT TRACER :

For even greater performance in detection actions, **KRYPTO PASTE** makes urine fluorescent !

Specially designed to attract rodents, the paste is formulated in an original way, it contains a substance that accentuates the fluorescence of urine under UV lamp. Thus, **KRYPTO PASTE** becomes an effective and indispensable tool for detecting a rodent infestation, allowing a careful inspection of the premises before implementing effective control measures.

Instructions for use

Preferably use bait stations to clearly identify where the **KRYPTO PASTE** is placed, and to accustom the rodents to entering the stations to feed there.

Detection :

- Place several bags of **KRYPTO PASTE** per station and check regularly (1 to 2 bags for mice and 6 to 10 bags for rats).
- No consumption: continue regular checks by changing the bait when it loses its freshness.
- Consumption: undertake a control operation.
- Verification of fluorescent traces: using a UV lamp, the verification of the presence of rodents can be refined: details on places of passage, places where the colony nests, soiled goods, etc.

Lure :

Apply **KRYPTO PASTE** to the baiting areas, just as you would a rodenticide paste. If the paste is consumed, you can then switch to a paste with a rodenticide active ingredient.

Packaging

10 g sachets - 5 kg bucket

Safety instructions

Although **KRYPTO PASTE** does not contain any active ingredients, it is not a foodstuff ; it is therefore recommended to keep it out of reach of children and pets. Store in the original packaging away from heat and humidity.
