

# PAR SMALL RATO

BAIT STATION  
INTENDED FOR RAT CONTROL

## Presentation

The **SMALL RATO** bait stations are rigid boxes designed to protect baits in rat control.

### Features :

- Hard and secure PVC
- Low clutter
- Block fixing system
- Dimensions : 220 x 125 x 70 mm
- Key locking system

## Strengths

The **SMALL RATO** bait station is particularly suitable for rat control. Its flat shape allows it to be placed in tight spaces, such as under pallets. Rodents will enter the station through the entry holes located on each side of the station.

The **SMALL RATO** bait station is easy to clean and can be reused.

## Security

The **SMALL RATO** bait station is secure; once the top part is closed, the station is locked; it opens using a special key supplied with the station. Thus securely closed, the station cannot be broken into (by non-target animals, for example).

Once closed, the key can be clipped onto the post.

## Packaging

**Ref. R3237** : Box of 30 units
