

VICTOR® ELECTRONIC RAT TRAP

ELECTRONIC TRAPPING SYSTEM
WITHOUT BIOCIDAL ACTIVE SUBSTANCE

Presentation

Quick method to kill rats.
Very economical, this trap kills 50 rats per set of batteries.
Can be used anywhere indoors.

Instructions for use

Easy to use, simply add a food bait (e.g. peanut butter), place it against the wall and light it.

The trap uses advanced smart circuit technology that detects when a rodent enters the unit. Once the rodent is inside, the system sends a high-voltage shock that effectively kills it.

A green light comes on when a rat has been captured and you can get rid of it.

Since rats' hearts can restart beating after an electric shock, the **Victor® electronic rat trap** emits a shock for two minutes to ensure the animal is killed and achieve a high capture rate.

Non-contractual images

Step 1, 2 : Insert the batteries
Step 3 : Put the bait
Step 4 : Position

Step 5 : Turn on
Step 6 : Empty

Characteristics

- Kills 50 rats per set of 4 C/LR14 batteries.
- Without poison.
- Easy to use.
- Intelligent circuit technology that detects the rodent upon entry.
- A flashing green light indicates that a rodent is captured and a red light indicates low battery level.
- The electronic rat trap is easy to clean and can be reused.
