

RACAN WHOLE GRAIN 25PPM PRO

BLACK RATS, BROWN RATS
DIFENACOUM 0,0025 %

**25
PPM**

Regulatory information

Product type	PT14 – Rodenticide
Formulation type	Ready-to-use (RB) grain bait
Active substance	Difenacoum CAS No. 56073-07-5
Concentration	0,0025% w/w
Bittering	Denatonium benzoate 10 ppm
Approved name	RACAN BLÉ 25
Targeted organism	Black rats (<i>Rattus rattus</i>) Brown rats (<i>Rattus norvegicus</i>)
Application	Use indoors and outdoors, around buildings, in open areas and landfills.

Mode of action

Difenacoum is a second-generation anticoagulant. Rodents die from internal bleeding. The first symptoms appear a few hours after ingestion, and death occurs on average 4 to 10 days later.

Instructions for use

The product should be used in secure bait stations or covered and protected bait points.

Against rats : 100 g of product spaced 5 to 10 meters apart

Inspect stations after 5 to 7 days to verify that the bait is consumed, then once a week.
Products should not be used beyond 35 days without assessment of infestation status and treatment effectiveness.

DO NOT use for PERMANENT BAITING.

Packaging

5 kg bucket

Disposal

Search for and remove dead rodents during treatment, at a minimum every time bait stations are inspected. Dispose of dead rodents in accordance with local regulations. After treatment, dispose of uneaten bait and packaging in an appropriate collection system.

Safety instructions

For alternate use, consider using a non-anticoagulant rodenticide, if available, or a more potent anticoagulant. If, after a 35-day treatment period, baits continue to be consumed and no reduction in rodent activity is observed, the cause should be determined.

PT14 - Use biocides safely. Always read the label and product information before use. Dangerous. Follow safety instructions.

The safety data sheet is available free of charge on request from the following address: fds@lodi.fr. For first aid instructions, contact the nearest poison control centre.
