

PHOBI

TECHNICAL DATA SHEET

PHOBI ANT BAIT LIQUID

Liquid bait for the control of ants
in non-agricultural areas

Composition

Sodium dimethylsinate (CAS 124-65-2) 5,75%
Contains appetizing agents

Mode of action

The active substance, sodium dimethylarsinate, is particularly suitable for controlling ants. Indeed, one of the characteristics of this substance is its speed of action: after contact and / or ingestion, the ants are not killed instantly, they have time to regain the anthill and to contaminate their congeners. The colony is completely eliminated within a few days.

Application and dose rate

PHOBI ANT BAIT LIQUID is intended to fight all anthills found in and around dwellings (in non-agricultural areas).

Application rate: 1 to 2 drops per m².

Directions: Pour a few drops on the passage of the ants by pressing the applicator bottle. If the floor is absorbent, place the product on a non-absorbent surface (glass, tile, bottle cap). You can then place **PHOBI ANT BAIT LIQUID** on the floor, against baseboards, in garages, cellars, terraces, balconies and in all places where ants are infested or likely to be infested.

Renew the operation, if necessary, 8 to 10 days after the first treatment. Close the bottle after use.

Package

50 mL applicator bottle / 24 units

Precautions

Use insecticides carefully. Before use, read the label and product information.

Professionals: please consult the safety data sheet available free of charge at the following address: fds@lodi.fr

Keep out of the reach of children and pets. Do not use this product for any purpose other than the one for which it was created. Dispose of the unused product and its contaminated packaging in accordance with the local regulations in force (General public in waste disposal / professionals through a collection of dangerous products).

Dangerous, respect the precautions of use.
