| Larvicide Emulsifiable concentrate | <h1>LARVOX</h1> <p><i>To fight against insect larvae For Professional use only</i></p> | |

1. PRODUCT OVERVIEW

Formulation type Emulsifiable concentrate
Active substance **S-méthoprène** (N°CAS : 65733-16-6)
Concentration 6,11% m/m
Action Growth regulator
Efficacy..... 6 weeks

2. MODE OF ACTION

LARVOX allows to fight against insect larvae (flea, bedbugs, flies, beetles ...). **S-methoprene** acts as a growth regulator on insects. This substance disturbs developmental cycle and prevents larvae to become adults. This conducts to a reduction of insect population.

3. DOSE & INSTRUCTIONS FOR USE

Well shake the solution and dilute 10 mL of **LARVOX** in 5L of water to treat 100m². Mix and spray the solution on surfaces to treat. Dilutions must be used within 48 hours after preparation.
The treatment is efficient 6 weeks after application. Renew the treatment if necessary. Rinse materials after use.

4. DISPOSAL

Do not throw out remaining products in sewers, stream or waterways.
Store in original packaging. Do not reuse the container.
Dispose of unused product and its container in a safe manner, according to the national rules.

5. PACKAGING

- I7121 : Flasks of 500 mL / Carton of 8 units

6. PRECAUTION before USE

Use biocides with caution. Read label and informations on the product before use. The safety data sheet is free available on request at fds@lodi.fr
Wear gloves and wash hands after use.
Product exclusively biocide, do not use in phytosanitary area (plants protection).
