

PHOBI

FLYING INSECTS

READY TO USE
BROAD SPECTRUM INSECTICIDE

PROFESSIONAL USE

Composition

D-Tetramethrin (CAS Number 1166-46-7): 1,5 g/L
Cypermethrin (CAS Number 52315-07-8): 5 g/L

Indications

D-Tetramethrin is the active form of Tetramethrin, a highly volatile molecule that gives **PHOBI FLYING INSECTS** a shock action. Cypermethrin combines this KD effect with a powerful immediate lethal effect (Killing effect) and long-lasting action.

PHOBI FLYING INSECTS is indicated for treatments against flying insects as it immediately knocks down insects in flight.

Formulated exclusively with pyrethroids, it is particularly recommended for interventions requiring the total absence of organophosphates.

Strengths

- Powerful shock effect.
- Strong long-lasting action.
- Odorless.

Instructions for use

Evacuate personnel from the treated area.
Spray areas frequented by insects, especially light-colored surfaces. Allow the product to act before re-entering the area.
Spray while retreating, distributing the product evenly.
It is unnecessary to wet the surfaces; a light, evenly distributed film is sufficient.

Special case for wasps and hornets: spray the nest in concentric circles from the periphery to the center. As a general guideline, approximately 1 L is needed to treat a medium-sized nest.

The quality of the treatment is as important as the quality of the product. Using a professional sprayer with an anti-drip lance is highly recommended.

LODI advice: rinse the sprayer thoroughly after use with clear water.

PHOBI

TECHNICAL DATA SHEET

Packaging

10 L can

Storage and disposal

Store in the original packaging. Do not reuse the packaging. The packaging and product must be disposed of as hazardous waste under the sole responsibility of the waste holder. Do not dispose of residues in sewers or waterways.

Safety instructions

PT18 - Use biocides safely. Always read the label and product information before use. Dangerous. Follow safety instructions. The safety data sheet is available free of charge on request from the following address: fds@lodi.fr. For first aid instructions, contact the nearest poison control centre.

Wear gloves and wash hands after use.
Always use a wasp-proof suit for nest treatments.
Product for biocide use only, not for phytosanitary use (plant protection). Do not use this product for any purpose other than its intended use.

Keep cats away from treated surfaces. This biocidal product contains pyrethroid active substance name which can cause severe adverse reactions in cats. If pets have exposure, get veterinary advice attention.
Keep out of reach of children and pets. Remove personnel, animals, aquariums, and food from the area to be treated.
Be careful with electronic equipment and sensitive surfaces (e.g., varnish). Test in a hidden corner.

PHOBI FLYING INSECTS is sensitive to freezing.
