

GEL BAIT INSECTICIDE AGAINST ANTS PROFESSIONAL USE

Indications

Gel bait for treating ant infestations.

The cartridge is designed to keep ants away long-term. The ants ingest and transport the gel to their nest, where they contaminate the rest of the colony (larvae and adults) within a few days.

Strengths

- Domino effect with a knock-down action.
- The most economical on the market.
- 100% of the anthill controlled in 6 days.

Regulatory information

Category of users: professionals.

Places for application: indoors, outdoors (around homes and buildings), terraces, patios. Inside industrial, retail and public buildings, private premises.

Targets:

- Black garden ants (*Lasius niger*)
 - Argentine ant (*Linepithema humile*)
 - Pharaoh ant (indoors only) (*Monomorium pharaonis*).
- All stages of development and destruction of nests.

Instructions for use

Use the cartridge with a professional bait gun.

Dose of use against ants : 2 drops of 0.1g gel bait per m².

Apply a maximum of 16 spots of gel bait in domestic properties and up to 72 spots when treating any commercial, industrial or public areas.

Apply the gel bait according to the zone to be treated observing dose of use. Apply drops where the ants walk or close to the nest (along walls, in the kitchen or on terraces).

In case of re-infestation, renew the application. A repeat application may be required 7 days after the initial treatment.
