

NO FLY

FLY DROP TRAP

+ FLY DROP POWDER

FLYTRAP WITH ATTRACTANT

FOR THE PROTECTION OF LIVESTOCK BUILDINGS
FOR OUTDOOR USE BY PROFESSIONALS

Indications

NO FLY Fly Drop Trap is designed to catch flies outside livestock buildings. It has two parts: a bucket and an attractant in powder form. Once diluted with water, the powder made from yeasts emits a typical odour that is very attractive for flies. Attracted by this odour, flies enter the bucket through one-way funnels and will no longer be able to get out. The installation of several traps (1 trap = 300m²) will provide a good protective barrier around buildings.

Composition

Saccharomyces cerevisiae (CAS number 68876-77-7): 39.90% (m/m)
Egg powder: 59.85% (m/m)

Strengths

- Easy to use, reusable.
- Contains no active insecticide.
- Effective for up to 7 weeks.
- Barrier effect around buildings.
- Suitable in Organic Farming according to Regulation (EU) 2018/848.

Instructions for use

Application season: April/May and September/October*

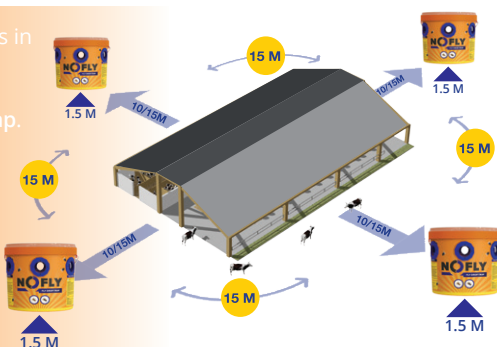

One trap covers approx. 300m²; allow 4 traps for every 1000m² to be treated.

Install the 6 one-way funnels in the holes in the tub.

Pour 240g NO FLY Fly Drop Powder into each NO FLY trap.

Add 6 L of water and mix. Position the traps 10-15 metres from the zone to be protected, spacing the traps 15 metres apart.

The traps should be placed 1-1.5m above the ground.

NO FLY Fly Drop Trap will reach its maximum efficacy after a period of 24-48 hours depending on light and temperature conditions. The trap is activated more effectively and faster at temperatures of above 25 °C. Do not allow the liquid to dry inside the trap. Maintain the original level of liquid by regularly adding water to compensate for evaporation. When the trap is full, remove the flies and refill with water to reactivate it. If used properly, a trap remains active for 30-60 days depending on the ambient temperature. When the trap is no longer active, wash it with soapy water and add a dose of **NO FLY Fly Drop Powder** and water to reuse the **NO FLY Fly Drop Trap**.

*Adapt according to the country and the seasonality of proliferation of adult flies.

TECHNICAL DATA SHEET

Packaging

NO FLY Fly Drop Powder : 240g jar - 6 units per box
NO FLY Fly Drop Trap : Kit (1 kit = 1 bucket + 1 jar)

Safety instructions

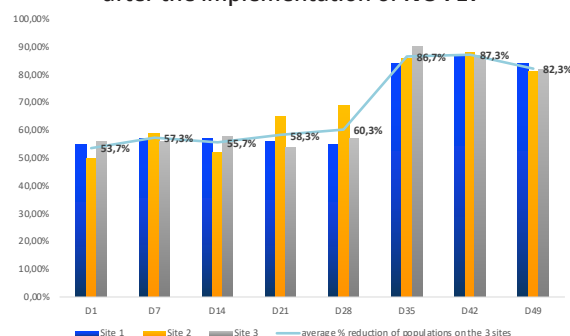

For professional use only.

PT19 - Use biocides safely. Always read the label and product information before use. Dangerous. Follow safety instructions. The safety data sheet is available free of charge on request from the following address: fds@lodi.fr. For first aid instructions, contact the nearest poison control centre.

Efficacy

Efficacy tests show a 50% reduction in house fly (*Musca domestica*) and stable fly (*Stomoxys calcitrans*) populations from the first day of installation of traps. After 6 weeks, these populations fall by 80-90%.

Decrease in % of Stable flies *Stomoxys calcitrans* after the implementation of NO FLY

Decrease in % of Houseflies *Musca domestica* after the implementation of NO FLY
