

INSECT AIR TRAP

SUCTION TRAP FOR CATCHING FLYING INSECTS

Presentation

The **INSECT AIR TRAP** is a suction trap for capturing and eliminating flying insects (flies, midges, mosquitoes, food moths, etc.). Its 32W lamp attracts insects which, on approaching, are sucked up by the propeller and then collected in a tank at the back of the trap. Check and empty the tank regularly (be careful, the insects may still be alive).

Ideal for use in domestic and public areas requiring the detection and control of flying insects (warehouses, food shops, hotels, etc.). The trap can be placed on a flat surface or fixed on the wall. It plugs directly into an electrical outlet. A trap covers an area of approximately 50 m².

Strengths

- Compact and easy to install.
- Hygienic device: suction of insects.
- 24-hour operation possible depending on the level of infestation.
- Simple and quick emptying of the tank.
- CE certified.
- Material in accordance with HACCP principles.

Areas of use

Indoor or outdoor use in dry and sheltered places:

- Commercial areas: hotels, bars, restaurants, food shops, food stores, cinemas, theatres, liberal offices...
- Industrial areas: agro-food industries, food processing plants, storage areas, offices, changing rooms, rest areas...
- Public buildings: hospitals, treatment rooms, schools, gymnasiums, prisons, food preparation areas, collective catering, public spaces...
- Domestic spaces: kitchens, dining rooms, bedrooms...
